Cosmos 'Cupcakes Mixed' see p17 for details

Wholesale Catalogue 2016-2017 www.tandmwholesale.com

Innovation for all seasons

Welcome to our new catalogue for the 2016-17 season.

The breeding program at Thompson and Morgan continues to develop new and innovative flowers such as Cosmos **'Cupcakes',** this brand new form of Cosmos has delicate, cup shaped flowers with fused petals. Their uniqueness gives you the opportunity to offer your customers something completely different. We pride ourselves on the fact that we have a wide range of varieties to offer that will flower in all seasons; hence our logo:

Other exciting introductions to the annuals range this year include **Viola 'Frou Frou'**, in a range of five colours. We also have an exciting new colour in Cosmos **'Lemonade'**, an amazingly different colour in Cosmos with striking yellow and white bicolour blooms.

Featured at the front of the catalogue are highlights showing some of the introductions for this year, followed by the complete range in alphabetical order. At the back are handy lists showing the different uses our varieties are suitable for, and detailed cultural information for every variety in the catalogue.

Once again we would like to welcome you to visit our extensive trials at our premises in Ipswich, just get in touch with your usual contact to arrange this.

Finally, we would like to thank you for your business in the past year and wish you every success in the year ahead.

9. '**Pretty**' (*umbellata*) A mix of highly contrasting pink and white flowers. *Ht* 30cm/12in

Helleborus - Kniphofia

Double Queen Mixed'

Helleborus

These shade loving plants provide a welcome burst of colour from the middle of winter to early spring. They are deer resistant and also ideal for use in containers and garden borders. Double Queen Mix was originally bred by Elizabeth Strangman at the Washfield Nursery; her achievement was to produce the world's first high quality blooms which were 100% true to type for double flowers. We have continued her work and are pleased to be able to offer a range of doubles in separate colours; again these are 100% true to type from seed. After extensive tests it is possible to achieve excellent germination from fresh seed (80% +). Ht 45cm/18in

* Seed supplied fresh from harvest in May.

Group ΉP

'Double Queen Mixed' (hybridus) A wonderful combination of white, red and pink, many with spotted throats.

Double separate colours please see inset images.

Ipomoea

Morning Glory plants make spectacular climbers, grown up against a sunny fence or trained through an obelisk in a container, adding height to a sunny patio.

1. 'Split Personality' (*purpurea*) A new star-shaped flower with magenta pink blooms. *Fleuroselect Quality Award. Ht 200cm/61/2ft*

2. 'Mini Sky-Blue' (*hirsuta*) A miniature climber with blooms opening in the evening. *Ht 150cm/5ft*

3. 'Sunspots' *(luteola)* Scarlet orange tubular flowers are produced over heart shaped leaves. Similar in habit to lpomoea quamoclit but with different foliage. Ideal for trellises. *Ht 200cm/6ft*

4. 'Blue Star' (*purpurea*) Beautiful sky blue flowers with contrasting pink/violet stars. *Ht 200cm/61/2ft*

5. 'Star of Yelta' (*purpurea*) A striking colour for this popular climber. Free flowering with large blooms. *Ht* 200cm/6¹/₂ft

6. 'Persian Star' (*purpurea*) A vigorous climber, white with faint blue blush flowers with large darker blue star. Large flowers are 10cm/4in across. *Ht* 200cm/61/2ft

7. 'Heavenly Habit' (*boreale*) Attractively contrasting flowers and stems with violet-blue blooms. Has a compact habit suitable for containers. *Ht 30cm/12in*

Potentilla

8. 'Fireball Mixed' (atrosanguinea) The first ever double flowered mixture with blooms of red, gold, orange and a few unique bicolours. Fleuroselect Quality Award. Ht 80cm/32in

9. 'Melton Fire' *(nepalensis)* Striking tri-colour blooms with attractive foliage and free flowering. Good for the garden border. *Ht 40cm/16in*

Fireball Mixed

Rhodochiton

10. 'Bell Vine' (*atrosanguinea*) A rapid growing climber producing masses of flowers. The small parasol shaped fuchsia pink calyx have black/purple flowers within them. Excellent for pergolas and trellises. *Ht 150cm/5ft*

Primula - Rudbeckia

'Beauty Deep Pink'

'Beauty Lilac'

'Beauty Pink'

Primula

'Beauty' Series (malacoides) A specially selected series of six colours for earlier flowering. These strongly fragrant spring flowering perennials are ideal for containers. Ht 25cm/10in

'Beauty Mix'

Rudbeckia

Rudbeckia make impressive and long-flowering border plants with outstanding weather resistance, as well as excellent cut flowers. All the hirta species are hardy annuals.

1. 'Cherry Brandy' (hirta) A colour break through - unique cherry-red shades. Excellent in beds, borders and as a cut flower. Fleuroselect Novelty Award. Ht 50cm/20in

2. 'Sahara' (hirta) A delightful mix of caramel and soft pink/red blooms. Flowers are semi double to fully double. Good heat tolerance and great for amateur cut flowers as well. Ht 50cm/20in

3. 'Ruby Ruby' (hirta) Unique colour in a compact double flowered Rudbeckia. Excellent in borders and as a cut flower. Heat tolerant with a long flowering season. Ht 25cm/10in

Sahara'

Rudbeckia - Silene

Rudbeckia

Rudbeckia make impressive and long-flowering border plants with outstanding weather resistance, as well as excellent cut flowers. All the hirta species are hardy annuals.

1. 'Green Wizard' (occidentalis) An extraordinary plant with bright green sepals where most other plants have petals. Ideal for beds, borders and as a cut flower, attracting beneficial insects. Ht 150cm/5ft

2. 'Cherokee Sunset' (hirta) Superb in borders and beds, predominantly double in a stunning range of colours and heat tolerant. Fleuroselect Quality Award and All American Selection Winner. Ht 50cm/20in

3. 'Chim Chiminee' (hirta) Unusual quilled flowers. Ideal cut flower, heat tolerant and excellent in borders. Ht 50cm/20in

4. 'Moroccan Sun'(hirta) A beautiful blend of fully and semidouble flowers. Colours range from bright clear yellow to bronze and marmalade. Ht 50cm/20in

5. 'Ruby Gold' (hirta) Contrasting formula mix of bright cherry red and yellow flowers. Ht 50cm/20in

6. 'Solar Eclipse' (hirta) Bright yellow flowers with mahogany centres, each up to 10cm across. Ht 50cm/20in

Cat Grass

Cat Grass

1. 'Tabby' (Hordeum vulgare variegate) Not just an outstanding seasonal ornamental or accent plant, variegated cat grass provides vitamins and fibre for your cat's diet and keeps them from chewing on your prized house plants. Edible for humans, too. Used just like wheatgrass, variegated cat grass can be freshly juiced or dried into powder. The claims about wheat grass' health benefits range from providing supplemental nutrition to having unique curative properties. *Ht 10–15cm/4–6in*

Beetroot - Radish

1 'Rainbow Beet'

1. Beetroot 'Rainbow Beet' Visually stunning 5 variety beetroot mixture; also available as separate colours. Wash young roots, peel and slice raw into salads to add colour. The stems and leaves make excellent salad ingredients, but can also be steamed. Baby roots are ideal for pickling, whilst mature roots can be steamed.

2. Pepper 'Bhut Jolokia Red' Perhaps the world's hottest pepper: measured at over 1 million Scovilles. Originating in the Assam region of India it has lime green fruits which ripen to red. Best grown under warm conditions to maximise the heat. *Ht 150cm/5ft (half this in a container)*

3. Pak Choi Purple An eye-catching reddish purple leaf, quick maturing and perfect for stir-fries or salads. *Ht 20cm/8in*

4. Radish 'Rainbow Mix' Visually stunning selection of coloured skinned radishes. Vibrant roots of purple, red/white bicolour, white, red and gold. Quick growing and can be harvested in as little as 28 days. Perfect for successional crops.

3 'Pak Choi Purple'

Tomatoes - Cultural Groups

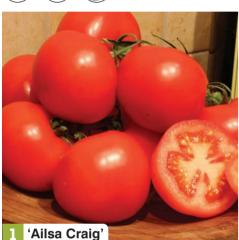

Tomatoes

1. 'Ailsa Craig' Indeterminate/Cordon type with 75g/21/2oz early ripening fruits, exceptional flavour. Ideal for indoor or outdoor growing. Pinch out at 200cm/61/2ft

2. 'Alicante' Indeterminate/Cordon type with 75g/21/20z fruits, Impeccable flavour. Fruits stay free of greenback and produce consistently heavy crops. Pinch out at 200cm/61/2ft

3 & 4. 'Balconi' Collection: A bush container type with strong dark green foliage and clusters of delicious fruits. No side shooting is required as the plants are naturally bushy with the weight of the fruit giving the plants a lax habit. Ht 45cm/18in

Alicante

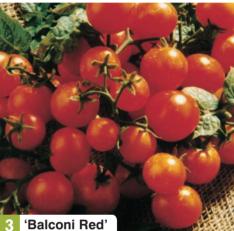

5. 'Black Cherry' Indeterminate/Cordon type with blackish/ purple skin. Abundance of 30g/1oz fruits over a long season, harvest July until first frosts. Ideal for greenhouse or outdoors in a sunny position. Pinch out at 200cm/61/2ft

6. 'Black Russian' A cordon type, heritage variety. Has a distinctive complex flavour with medium-sized, dark mahogany fruits. Ht 120cm/4ft

7. 'Gardener's Delight' An indeterminate/ Cordon type with a true tangy tomato flavoured, bite sized fruit. 30g/1oz fruits. Easy to grow variety. Pinch out at 200cm/61/2ft

8. 'Ildi' A cordon type, with small yellow pear shaped fruits. Can produce up to 80 fruits per truss. Ht 150cm/5ft

9. NEW 'Orange Ray' A striped Roman tomato with long sausage shaped striped fruits. Ht 150cm/5ft

1st Yr Flowering Perennial Direct Sow Scented Caution Cut Flower

Our technical growing staff have carried out extensive cultural tests for all varieties to add additional value and help you sell more seed and plants.

Take advantage of our extensive knowledge and push sales themes like 'First year flowering perennials' that we have marked with this symbol on each applicable variety.

Each variety has a group as indicated by the letter symbol at the end of each description. The grouping is based on northern European climate conditions.

We have grouped all varieties into sowing times in order to provide more detailed cultural information about sowing and growing on plants. These can be found on pages 59 and 60. More specific information about each variety can be found on pages 64 to 66.

The groups are as follows: First year flowering perennials Group Α and Half-hardy perennials Group Hardy perennials and biennials B Group Hardy annuals C Group Half-hardy annuals and vegetables Group **Violas and Pansies** E Group Helleborus

Group **FIRST YEAR FLOWERING PERENNIALS** & HALF-HARDY PERENNIALS

Sowing time: January-March

Germination temperature: 18-20°C (65-68°F)

Days to germinate: 10-14

SOWING Sow onto a moist seed-sowing compost in a 576 to 150 cell plug tray or larger cell if preferred. Cover lightly with vermiculite to the depth of the seed and propagate at 18-20°C (65-68°F). Germination should take place after approximately 10-14 days depending on the variety.

GROWING ON Grow on at 15° C (60° F) reducing to 10° C (50° F) as the seedlings develop and fill the tray. When the plug plants are established - generally 6-8 weeks from sowing - pot on into 1 litre pots for sales in April-early May or pot 3 plugs into a 2 or 3 litre pot for later sales in flower in late June.

Note: All first-year-flowering perennials can also be treated as hardy perennials - see below.

(GOUP) HARDY PERENNIALS AND BIENNIALS

Sowing time: May-July Germination temperature: 18-20°C (65-68°F)

Days to germinate: 10-14

SOWING Sow onto a moist seed-sowing compost in a 576 to 150 cell plug tray or similar size unit. Cover seed with vermiculite to its own depth until no longer visible and propagate at 18-20°C (65-68°F). Germination should take place after 10-14 days. After germination maintain a temperature of 15°C (60°F) or as cool as possible depending on the weather conditions. Shade the seedlings from strong, direct sunlight.

GROWING ON Grow on the seedlings in a lightly shaded area until they are established and fill the tray. Pot on in late August-September into 1 litre pots, or put 3 plugs into 2 or 3 litre pots. Over-winter in a well-ventilated, unheated glasshouse or tunnel for sales the following March-April or for flowering plants ready to sell from early May-June.

Cultural Groups

Group HARDY ANNUALS

Sowing time: September and January-March Germination temperature: 15-20°C (60-68°F) **Days to germinate:** 7-10

SOWING For best results multi sow 3 to 4 seeds per cell in a 150 cell plug tray or slightly larger unit. Sow on to the surface of a free-draining, moist seed-sowing compost and cover with 3-5mm (1/4in) of vermiculite. Propagate at 15-20°C (60-68°F). Germination should take place in approximately 7-10 days. Maintain a temperature of 15°C (60°F) after germination until the seedlings are established. Alternatively sow direct into 12 packs, 9cm pots or preferred final unit of sale.

GROWING ON When the seedlings are established transfer the plugs into a 9cm pot or 6 pack. This should result in quality plants with a good display of flowers for sale from May onwards.

DIRECT SOW Sow direct into open ground in September or from March-June. The speed of germination will depend on the soil temperature and weather conditions and could be from 7 to 21 days. Sow the seed 2-3cm (3/4-11/4in) deep in rows 60-90 cm (25-35in) apart depending on variety with a distance of 10-30 cm (4-12in) between the plants. Ensure all ground is weed free and well prepared before sowing.

Group HALF HARDY ANNUALS & VEGETABLES D,

Sowing time: February-April

Germination temperature: 20°C (68°F) Days to germinate: 7-10

SOWING Sow onto the surface of a moist seed-sowing compost in a 576 to 150 cell plug tray depending on the variety or slightly larger unit if preferred. Cover with vermiculite to the depth of the seed until the seed is not visible and propagate at 20°C (68°F). Germination should take place after 7-10 days. Maintain a temperature of 15°C (60°F) for the seedlings after germination.

GROWING ON Continue to grow the seedlings on at 15°C (60°F) until they are established and fill the tray. Transfer to a 12 pack, 6 pack or 9-cm pot and continue to grow on at 10-15°C (50-60°F). Early February sowings will result in flowering plants for sale in late April-May. Later sowings made in April can be potted on into 1 litre pots for sales of more established flowering plants in late June. Use of the growth regulator B Nine will help to keep the plants compact.

Group VIOLAS & PANSIES

Sowing time: January, June and September Germination temperature: 15-18°C (60-65°F) Days to germinate: 7-10

SOWING Sow onto a moist seed-sowing compost in a 576 plug tray or similar size unit, cover lightly with vermiculite and propagate at 15-18°C (60-65°F). Germination should take place after 7-10 days. Sow in January for sales in April; in June for sales in September; and in September for over-wintering for sale in flower in early spring. Care should be taken with summer sowings to ensure that germination temperatures do not exceed 20°C (68°F) as this will reduce the rate of germination considerably.

GROWING ON Grow on the seedlings from the January sowings at 15°C (60°F) until they are established and cover the surface of the plug tray. Take care to grow quite cool to help avoid any stretching of the plants. Approximately 6 weeks from sowing transfer to a 12 pack, 6 pack or 9cm pot. January sowings should be ready for sale in early to mid April. If additional growth control is required then Cycocel can be applied, which will help to improve the quality and habit of the plants.

June sowings should be grown on as cool as possible, shaded from direct sunlight, and potted on as above. This will give plants for sale in flower from September onwards.

September sowings should be ready to be transferred to packs and pots in late October and held over winter in a wellventilated, unheated glasshouse or tunnel for sale in flower in late February-early March.

Pansy and Viola can be susceptible to both powdery and downy mildew so always be vigilant for these diseases and treat promptly with the appropriate chemical.

Group HELLEBORUS F

Sowing time: June Germination temperature: Outdoors - see below Days to germinate: 150 – 200

SOWING Sow Helleborus seed in June using fresh seed from new crop. Sow on to a free-draining, moist compost and cover with 3-5mm (1/4in) of coarse grit. The best germination results are achieved by allowing the seed to germinate naturally in a shaded area, either a cold frame or netted tunnel. Check regularly and keep moist and weed free. Germination can be erratic: seedlings will begin to emerge in November as temperatures cool and the bulk of seedlings will emerge during early to mid December. At this stage the seedlings can be moved under cover to an area at 5-10°C (40-50°F) and pricked out.

GROWING ON Prick out the seedlings into 150 cell plug trays using a well-drained compost and grow on at 10°C (50°F). Overwinter the seedlings in a well-ventilated glasshouse maintaining a temperature of 5-10°C (40-50°F). The plugs will develop and be ready for potting in late April. Pot in 7-9cm pots and grow on outdoors, preferably in a netted tunnel, for sales in late summer or pot on again into 3 litre pots and over-winter for sales the following year.

Wholesale Terms of Business

Expressions "the company", "we", "us", "seller", "T&M" refer to Thompson & Morgan, a trading division of Branded Garden Products Limited. The expressions "purchaser(s)", "customer(s)" refer to persons, firms or companies contracting with the company for the purchase of its products.

Prices are in either Pounds sterling, Euro or US dollars and are based upon prevailing costs. We reserve the right to change prices without notice. Prices are for the quantity or unit as specified in the relevant price list or catalogue unless otherwise stated. VAT and sales tax will be applied at the prevailing rate where appropriate.

Shipping and Handling charges will be applied. These may vary according to size of order and the location of the customer. Individual charges will be applied to wholesale orders. Limitation of Liability

a) The company believes that the description and characteristics of the products appearing in its catalogue are materially correct. However, all information whether contained in our catalogue or website or given by our staff relating to characteristics, periods of maturity or fitness for any particular purpose or otherwise relating to the performance of the product is given for general guidance only. Purchasers are advised that any such information given to them does not constitute a representation by the company as to these matters and should not be relied upon by the purchaser. Purchasers should satisfy themselves that any products which they order are of a type and performance satisfactory for their requirements and order such products at their own risk.

b) Seed and plant quality: in the event that any seeds or plants supplied do not comply with the terms of contract of sale or prove defective, whether as regards purity or germination or otherwise, the company will, [subject to the purchaser providing at his own expense proof that the seeds or plants alleged not to have performed satisfactorily were in fact supplied by us and that they were sown and/or cultivated under suitable conditions, treated carefully and correctly throughout and subject only to conditions as were likely to produce a favourable crop], at its option replace the seeds or plants free of charge to the purchaser or will refund all payments made to us by the purchaser in respect of the defective seeds or plants and this will be the limit and complete extent of the company's obligation. No claims regarding germination can be accepted if made later than 60 days after delivery or 30 days from expected germination date [whichever is later]. No claims regarding quality of plants can be accepted if made later than 7 days after delivery. Seller accepts no liability whatsoever for any seed which has been repacked by the buyer.

c) Seeds or plants which we provide are intended only for use in or export to countries where their cultivation is permitted. It is the sole responsibility of the purchaser to ascertain and obey all laws, which apply to the possession and cultivation of any items listed in our catalogues or website, this includes plant irritation and toxicity. Please consult local, provisional and federal laws (including pertinent laws applied to your country) before placing an order. T&M does not assume any responsibility if customs or similar agencies confiscate seeds or plants. The risk of shipping falls on the customer.

d) For the avoidance of doubt, all liability whatsoever is excluded for any loss, expense or damage whether direct or consequential arising in any way whatsoever in connection with any products supplied by the company whether due to any failure in the performance of or any defect in any such products or otherwise save for the liability to replace or refund in b above. The price of all goods sold by us is based upon the foregoing limitations on our liability and would be much greater if a more extensive liability were required to be undertaken by us.

Minimum Order. The minimum order value will apply: please see the relevant price list. Each delivery or consignment shall stand as a separate contract.

Damage, Delay or Loss in Transit. It is the purchaser's responsibility to inspect goods carefully on arrival. If there is any sign of damage the purchaser should notify us immediately by email, phone or fax enabling us to pursue a claim with the carrier. In the event of non-arrival of goods within 14 days of order, please advise us enabling us time to follow up the matter within the carriers' normal terms of 28 days. Customers should not return products to us without first obtaining authorisation and shipping instructions.

Title and Risk. Until paid for in full, all goods supplied by us shall remain our property. Risk passes to the buyer on shipment of the goods. Any dispute which may arise to be settled by arbitration in accordance with the rules of the United Kingdom Agricultural Supply Trade Association Limited (UKASTA).

Crop Shortage. In the event of a product shortage we reserve the right to fulfil or pro-rate orders on a first come, first served basis or cancel the contract without liability to either party. In the event of cancellation, we will credit any payment already made by the customer.

Payment. Sterling, Euro and US Dollar online and faxed orders will require payment by credit or debit card which shall be debited on receipt of order to reserve the products. Orders by post may be accompanied by credit or debit card details or a cheque made payable to Thompson & Morgan. We will accept cheques drawn in the following currencies: Sterling, Euro and US Dollars. [US and Canadian customers will be required to pay in US Dollars].

Credit Accounts. We will agree to consider credit facilities for larger customers. Credit accounts are due within 30 days of invoice and we reserve the right to charge interest on overdue accounts at 3% above the Bank of England base rate. We may refuse to execute new orders if overdue accounts remain outstanding. In the event that a customer (a) has a liquidator or receiver appointed in respect to any property or business undertaking, (b) announces that it has ceased or will be ceasing to trade, (c) notifies any creditor that it is unable to pay debts as they fall due, (d) calls or hold a meeting of creditors, (e) commits an act of bankruptcy or is adjudicated bankrupt or has an administration order made, (f) enters into any arrangements with its creditors or (g) suffers distress or execution to be levied on the buyer's property, then not withstanding any previous arrangements for deferred settlement, all sums payable to us by the buyer shall become immediately due and we have the right (without prejudice to any right or remedy available to us) to cancel or suspend future deliveries.

Protection of Seller's Rights. The customer agrees that seed or plants are sold for the express purpose of onward sale as seed or plants and NOT for seed crop multiplication. The buyer agrees to comply at all times with the requirements of the Plant Varieties and Seeds Act 1964 (as amended) in so far as they relate to the protection of the seller's Plant Breeder Rights in seeds and plants. The customer agrees that the products shall be supplied for its sole use. The customer agrees not to export the seed or plants from the territory in which the customer is resident. The customer agrees that they will ensure that their terms of sale protect the seller's rights as detailed here, throughout the supply chain. Acceptance of Terms. The giving or a sending of an order to us constitutes an acceptance of these terms by the purchaser. If the purchaser does not accept these terms, the goods

Acceptance of Terms. The giving or a sending of an order to us constitutes an acceptance of these terms by the purchaser. If the purchaser does not accept these terms, the goods must be returned forthwith.

These Terms and Conditions are governed by the laws of England and Wales. Copyright © Thompson & Morgan (Group) Ltd ALL RIGHTS RESERVED July 2016
